ABSTRACT OF THE DISCLOSURE

a developing cartridge detachably mountable to a main assembly of an electrophotographic image forming apparatus, the apparatus includes a frame; 5 developing means for developing an electrostatic latent image formed on an electrophotographic photosensitive member; a first projected portion, projected from the frame, for engagement with a first positioning portion provided in the main assembly of 10 the apparatus when the developing cartridge is mounted to the main assembly of the apparatus to position the developing cartridge; a second projected portion, projected from the frame, for engagement with a second positioning portion provided in the main assembly of 15 the apparatus when the developing cartridge is mounted to the main assembly of the apparatus to regulate rotation of the developing cartridge about the first positioning portion; and a cartridge guide member, projected from the frame, for contact to a main 20 assembly guide portion provided in the main assembly of the apparatus to guide the developing cartridge when the developing cartridge is mounted to the main assembly of the apparatus, wherein the second projected portion is urged in a direction of 25 contacting to the second positioning portion when the developing cartridge is set in the main assembly of the apparatus.
